

HEET

Hempel Estimation and Engineering Technology

As a valued Hempel customer our brand new passive fire protection estimation software package (for Microsoft Windows) is now available to you as a complimentary download.

This package has been designed for Hempel's range of intumescent coatings, with efficiency and user-friendliness in mind. We want to help you speed up the thickness and volume calculations for your projects, remove estimation as a pain point and enable you to carry out this work on your terms. In addition, we will continue the development of our new software based on your valuable feedback to ensure we meet the needs of your business as a trusted partner.

Please reach out to your local Hempel sales representative for further details and to arrange your training today! We also offer complimentary estimation and engineering support for all your projects in addition to this new software package.

For support, feedback and improvement suggestions please email:

HEET-support@hempel.com

Key functionalities
