

Durable coating solutions for trailers

Achieve superior corrosion protection for the long haul

Here at Hempel, we have worked closely with the trailer manufacturing industry to innovate highly durable, long-lasting primer and finish coatings focused on improving in-line productivity and flexibility without sacrificing corrosion resistance, chip protection and color retention in harsh environments.

Patented activated zinc primer technology

Featuring our Hempadur Avantguard® 550 and 750 primers

Features and benefits

- Superior corrosion protection with reduced rust creep
- Higher durability with improved mechanical strength and crack resistance
- Best-in-class over-coating intervals (topcoat in 45 minutes at 86°F/30°C) and greater working tolerances at high DFTs
- In compliance with the requirements of Level 2 and Level 3, type II in SSPC Paint 20, 2002 and ISO 12944 C5 high, 2007

Primers ideal for wet-on-wet applications

Featuring our Hempaprime Shield 450 MS, 680 HS and 700 HS primers

Features and benefits

- 450 is a quick drying phenolic modified alkyd base primer with excellent strike-in properties
- 680 HS is a fast-dry polyurethane/polyaspartic primer which incorporates a one catalyst system, providing wet-on-wet application and allowing for sanding after only 1 hour of dry time
- 700 HS is a high solid, epoxy primer which is low VOC, HAPS free, TIN free, and ready to spray from the container without thinning

Tough high-performance polyurethane topcoat

Featuring our Hemptop Finish 850 HS

Features and benefits

- Two component polyurethane topcoat offering a high-quality appearance with exceptional color and gloss retention
- Formulated for spray usage in areas requiring VOC as low as 2.8 lbs/US gallon [336 g/L]
- 62% high volume solids content - better for the environment and improves health and safety in the paint shop
- Quick dry-to-touch (within a few hours) and re-coatable for a longer period of time with no preparation needed
