

How our coatings are made

Did you know...?

One truckload of coatings leaves our factories roughly every 20 minutes.

Our fastest filling line can fill 400 litres of paint in 60 seconds.

We use around 450 different types of raw materials in our coatings.

We produce around 650,000 litres of coatings per week

Better for the environment

We take our environmental commitment seriously.

- Efforts are continuously made to reduce waste (reduced 16 percent in 2014)
- Our energy use per ton of product has been stable for the past five years despite increasing automation
- 26 Hempel sites are environmentally certified according to ISO 14001
